NOTIFICATION DATE 07/15/2009		DELIVERY MODE ELECTRONIC		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

VSOLIS2@SLB.COM
ABrown15@rosharon.oilfield.slb.com
jalverson@slb.com

Office Action Summary

Application No.

09/920,895

Applicant(s)

GOODE ET AL.

Examiner

THOMAS A. BEACH

Art Unit

3671

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 10-12, 25-29 and 44-51 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 10-12, 25-29 and 44-51 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SF/IC)
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date: ____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: ____
- Paper No(s)/Mail Date: ____

DETAILED ACTION

1. In view of the Board Decision mailed 03/24/09, reopening of prosecution in accordance with 37 CFR 1.198 is hereby submitted with the following office action approved by the Director.

/Wynn W. Coggins/

for

Frederick Schmidt

Director Group 3600

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 10-11, 26, 28, and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hawkins et al. 6,302,199 in view of Kilgore 6,182,765. Hawkins shows a method including of halting the flow of fluid in a well (col. 2, lines 31-40); deploying a tool 68/70 from within the well while the fluid is halted (col. 2, lines 31-40); allowing the tool to free fall in the well while the fluid is halted (since the valve 100 is closed); but does not disclose resuming the flow to retrieve the tool.

Kilgore shows a similar method including of halting the flow of fluid in a well to “free fall” a deploying tool 315 from within the well (col. 3, lines 42-44); allowing the tool to free fall in the well while the fluid is halted (col. 6, lines 64-67 & emphasis added *col. 3, line 44*); and resuming the flow, pressure within the well could only be from the fluid, to retrieve the tool (col. 7, lines 1-6).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Hawkins, as taught by Kilgore, to include returning of the tool for the expected benefit of reusing the tool by utilizing the recirculation pressure to return the tool.

As concerns claim 26, the combination (Hawkins & Kilgore) show using the tool to take a corrective action in the well (col. 1, lines 40-45; col. 6, line 67 & col. 7, line 1, respectively).

As concerns claims 28, the combination (Kilgore) shows triggering the halting in response to a command (col. 5, lines 48-50).

As concerns claim 29, Hawkins shows triggering the halting in response to a previous measurement indicating intervention is needed in the well since Kilgore is capable of once a problem is detected (col. 7, line 1) another tool may be selected and utilized which will be dropped in free fall to its determined height using the computer 430.

4. Claims 12, 25, 44-48, and 50-51 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hawkins et al. 6,302,199 and Kilgore 6,182,765, as applied to claim 10 above, further in view of Bijleveld et al 6,241,028. The combination shows the

elements of claim 44 including the use of a spherical tool, but does not disclose the use of the tool as including a sensor. However, shows a similar tool 40 that is rolled into well (fig 3) that includes a sensor (fig 2) capable of collecting data, perform tests, and measuring properties of the well, along the well (claims 25 and 46).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the combination, as taught by Bijleveld, to include a tool having sensor(s) for the expected result of improved operations utilizing collected data regarding the well and its properties.

As concerns claim 45, the combination (Hawkins & Kilgore & Bijleveld) shows introducing a delay that allows the tool to reach a certain depth.

As concerns claim 48, the combination (Hawkins & Kilgore) show using the tool to take a corrective action in the well (col. 1, lines 40-45; col. 6, line 67 & col. 7, line 1, respectively).

As concerns claim 50, the combination (Kilgore) shows triggering the halting in response to a command (col. 5, lines 48-50).

As concerns claim 51, Hawkins shows triggering the halting in response to a previous measurement indicating intervention is needed in the well since Kilgore is capable of once a problem is detected (col. 7, line 1) another tool may be selected and utilized which will be dropped in free fall to its determined height using the computer 430.

5. Claims 27 and 49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hawkins et al. 6,302,199 and Kilgore 6,182,765 and Bijleveld et al 6,241,028, as

applied to claim 10 above, further in view of Littleton et al 4,709,719 or Ashton 4,785,880. The combination does not disclose a timer; however, Littleton discloses control panel timer (col. 6, line 60) and Ashton with element 100 disclose the well known use of a timer to halt between tool launchings. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the combination, as taught by Littleton or Ashton, to include a timer for the expected result of improved operations by controlling the launch procedure of the tools in response to the know element of a timer.

Response to Arguments

6. Applicant's arguments regarding Kilgore and the Board decision are noted; however, they are moot in view of the new grounds of rejection above.

The fact remains that Kilgore has contemplated and discussed "free fall" of a tool with in the well (see col. 3, lines 42-46; & fig 2), thus clearly it flows from the reference that free fall requires the halting of pressurized fluid flow in order for the tool deployment to free fall. Kilgore has now utilized as a secondary reference where the primary reference Hawkins clearly teaches the elements of the claim such as halting of fluid flow in order for a tool to be dropped in free-fall. Kilgore is a similar reference that demonstrates and teaches that the additional step of returning the tool using the recirculation fluid flow to retrieve a tool is well known in the art.

Regarding the Board Decision and in particular Fact 3 (as presented and relied upon), which discusses another embodiment in the preceding lines (col. 5, lines 9-11)

that specifically states the addition of pumps and valves would be required to enable 240 to be utilized during operation in which production fluid is flowed, thus an alternative embodiment. Fact 2 demonstrates what is needed and utilized in order for the tool to be deployed in a free-fall state, that a complete shut-down with the master valve, thus no production fluid flow to enable free flow. Therefore, the embodiment shown (*and not the one that requires modification of pumps, valves etc to enable 240 to function during "operations" relied upon by the Board*) includes halting of fluid by valve 220 in order for the tool to "free-fall" from 240 into the well (fig 2). Furthermore, applicant does not claim the production fluid that is halted, merely fluid.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas A. Beach whose telephone number is 571.272.6988. The examiner can normally be reached on Monday-Friday, 8:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Will can be reached on 571.272.6998. The fax phone number for the organization where this application or proceeding is assigned is 571.273.8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
